**Overwatering in the community is contributing to the spread of Kyllinga and the worsening of drainage issues. It causes the leaching of fertilizers and nutrients and the development of shallow rooted lawn grasses which are not able to withstand periods of summer drought. Additionally, the stress placed on the water supply during the summer because of overwatering is a serious threat to the ability of the Township's fire department to adequately fight fires.**

**Therefore, It is the request of the Board of Directors, Management and the Roads & Grounds committee that the following SPRINGTIME watering schedule will be adopted by all Greenbriar residents.**
