Snow Removal Procedures & Zones

By Joan Jones

Emergency Snow clearing will be provided only for those who require emergency medical/life sustaining equipment and/or treatments(s) and are registered with the GOCA Management Office. A doctor's verification must be submitted with the registration for emergency snow clearing.

1. Snow removal on roadways is initiated when snowfall amounts exceed 2 inches.
2. All fire hydrants currently have a 6-foot flag on top and are cleared as appropriately needed for fire department personnel.
3. Vehicles should not be parked in roadways if snow is anticipated. Residents are encouraged to park vehicles in their garage whenever possible. If you have temporary parking needs beyond that of your garage/driveway, you may park on the restaurant side of the clubhouse.
4. Driveways will be started when snowfall has stopped and roadways are clear. Needed ice melt will be applied to driveways once.
5. Snowfall of 2 inches to 10 inches will be cleared from roadways and driveways within 24 hours after snowfall has ceased.
6. Snowfall in excess of 10 inches will be cleared from roadways and driveways as quickly as conditions and equipment allow.
7. Walkways leading to the front door will be cleared and ice melt will be applied to the area once.
8. As time and equipment allow, snow clearing will take place in eight different zones (areas) of the community concurrently.
9. As a zone is completed, equipment will be sent to zones which are still being cleared.
10. Mailboxes will be cleared as equipment and manpower become available.
11. Contracted snow removal workers cannot provide any additional individual snow removal service to homeowners.
12. The street order in which snow is cleared is rotated throughout the season.

SNOW CLEARING ZONES
